## *Power Arc Ignition For Ural's*

Raceway is the exclusive distributor of Ural specific Power Arc ignition systems. Retrofit your Ducati or type 3 thru 5 Russian ignitions. Two ignition curves are loaded into the processor - one is the standard Ural/Ducati curve, the second curve can be accessed via momentary on, toggle or VOES switch. Changing curves allows an engine in detonation to operate with a less aggressive curve so as to avoid abnormal combustion problems. Optical reader triggered ignition means no spark scatter on acceleration /deceleration (in other words you get very precise timing) Coil receives no current if the engine is not turning over (no "hot" coils ever). Multi-Spark feature (fires three times each firing cycle (means all the fuel is burned in the cylinder) - results in low emissions more power, stable idling, improved acceleration - eliminates carburetor popping. Simple installation, built in LED timing light. Tach lead and rev limiter standard. Custom coil mount available. Complete with necessary installation hardware, plug wires and plugs
