

# *Ural Maintenance*

## *Hyper Lube*

*P/N RW960107 M*

At first we thought this was just another "miracle in a bottle" - but after 12 years of using the stuff - it has proved to do a most valuable job in the Ural - that being keeping up the grade weight of engine and final drive lubricants between oil changes . Yes - there are friction reduction benefits in using the product but the BIG feature is keeping viscosity levels up. Ural engines use ball & roller bearings as well as internal gears to operate themselves - these "grinders" tend to wear down viscosity indexes faster without the additive - resulting all too soon in very "thin" oil. Of course the label trumpets "other" benefits that may or may not accrue. We won't argue these items - we just know what works!

*Opinion? Well Worth The Price!*
