Sun Rims Spoked To Your Wheel Hub

P/N RW1005101 W

High strength aluminum rim wheel conversions for all Ural's Lighter rim reduces unsprung weight, lowers inertia effects and promotes more stable handling. Rims are CNC drilled to match wheel hub spoke patterns. New stainless steel spokes and plated nipples are used to build up a very "true" wheel that has almost no eccentricity or side to side run out. Aluminum rim is anodized to prevent corrosion. Exchange basis only, send us your bare hub - we send your respoked wheel rim and hub assembly back. Sun rims do not have raised nipple receivers - they are smooth on the view side.

Much easier to clean them.
