Foot Box With Braced Crash Bar

Here's one for the off road rider!
Left side foot rest replaced with comfortable extruded metal floor foot box. Raised lip around perimeter helps prevent riders foot slipping off
Braced crash bar will take a considerable "hit" with this system. Foot box is welded to standard foot rest. All bolt on design - no drilling or welding required to install. Finished in matt black powder coat. Allows standing rider strong anti slip platform to "work" the bike in off road conditions.
Does not infer with exhaust system or foot shift pedal.

Happy Trails!
