## *Engine Sump Guard*

*P/N RW900130 A*

3/16" tempered aluminum construction - formed sides curl around header pipes helping to shield pipes from contact. Design allows sump guard to move slightly under contact - thus absorbing shock and protecting frame and engine main case from twisting and crushing forces. Design theory is: it's better to have the guard absorb contact forces than the engine and frame - also aluminum spreads contact forces over a wide area compared to steel plate. Frame down tube clamps will "give" under hard contact - again absorbing contact pressure. Sump Guard is matt black powder coated, Drain plug access hole provided. Comes with U bolt clamps & rear mounting hardware.
