Tuff Shaft For Side Car Drive Axle

P?N RW900157 A

Ural side car drive shafts are subject to bending / twisting in rough terrain conditions, jumping the bike (especially under full power) and overloaded with excessive amounts of gear (Who - Me?). Comes now the cure for all but insane conditions - the **Tuff Shaft**. Basically, we retro fit factory end pieces to a length of 4130 Chrome Moly .120" wall tubing. MIG welded in our fixture and correctly clocked to align universal joint ends (to prevent vibration and undue wear). Chrome Moly tubing works like a spring, unless vastly overstressed, returns to its original alignment if flexed. After welding, Tuff Shafts are bright zinc plated for corrosion control and appearance. Sold outright - no exchanges.

Avoiding Bent Drive Shafts Requires The Tuff Shaft
