

# *Ural Driving Aids*

## *Hill Holder Brake Kit*

P/N RW 930110 DA

Uses SAE certified hydraulic line locker / solenoid operated in-line valve system. Allows the front brake to act as emergency brake. Caution: For "off road" use only. Activated by switch located in the RH handlebar switch module. To operate - switch to "On" position, squeeze the brake lever - brake is locked. To unlock, switch to "off" position, squeeze the lever - brake is released. Same system used on fork lifts, utility vehicles, garbage trucks and so on. Advantage is not having to take hands off the handlebars when needing to lock wheel for parking purposes. Does not interfere with braking action in "off" position. Kit supplied with stainless steel armored SAE certified brake lines, mounting hardware, instructions, brake fluid, and RH switch module.
